Introduction

On January 30, 2017, the Center for Toxicology and Environmental Health, LLC (CTEH®) initiated air monitoring and sampling following a line strike to the Enterprise Products S1 pipeline near McKinney, TX. Real-time air monitoring and analytical sampling were initiated to monitor product recovery operations and the surrounding community. Real-time air monitoring consisted of roaming hand-held monitoring and fixed-remote telemetering stations. Analytical air sampling consisted of personal sampling and community air sampling.

This report summarizes air monitoring data recorded from February 1, 2017 at 07:00 to February 2, 2017 at 07:00. Appendix I contains incident site maps and sampling locations.

Real-time Air Monitoring[1]

Real-time air monitoring was conducted to document and quantify the potential release of fugitive emissions (if any) resulting from the release. All instrumentation was calibrated at least once per day or per manufacturer's recommendations. Target analytes were measured as total volatile organic compounds (VOCs), benzene, hydrogen sulfide (H_2S), toluene, hexane, and percent of the lower explosive limit (%LEL) using remote telemetering RAESystems® AreaRAEs, handheld instruments, such as RAESystems® MultiRAEs (MRs) and Gastec® colorimetric detection tubes. Fixed location monitoring was conducted using five AreaRAE monitoring stations (AR) placed along Hwy 121 along the incident site and work area.

[1] *Real-time air monitoring provides near instantaneous measurements for concentrations in air without the need for laboratory analysis.*

Table 1, presented below, summarizes data for roaming, hand-held instruments in the community and work area.

Table 1: Hand-held Real-time Air Monitoring Summary[1]

February 1, 2017 at 07:00 to February 2, 2017 at 07:00

Location Category	Analyte	Instrument	Count of Readings	Count of Detections	Range of Detections[2]
Community	Benzene	UltraRAE	40	0	< 0.05 ppm
	VOC	MultiRAE	40	0	< 0.1 ppm
Worker Monitoring	%LEL	MultiRAE	83	0	< 1 %
	Benzene	Gastec 121L	1	0	< 0.05 ppm
	Benzene	UltraRAE	67	11	0.05 – 0.95 ppm
	H_2S	MultiRAE (Pro)	30	0	< 0.1 ppm
	H_2S	MultiRAE (Plus)	49	0	< 1 ppm
	Hexane	Gastec 102L	1	0	< 1 ppm
	Toluene	Gastec 122	1	0	< 1 ppm
	VOC	MultiRAE	163	97	0.1 – 203.0 ppm

[1]Please Note: The data displayed in the above table has not undergone complete QC analysis and is presented in preliminary format.
[2]Values listed under Range of Detections preceded by the "<" symbol are considered non-detections and the limit of detection (LoD) value is listed to the right.

Table 2: Remote Telemetering Real-time Air Monitoring Summary[1]

February 1, 2017 07:00 to February 2, 2017 at 07:00

Unit	Analyte	Count of Readings	Count of Detections	Range of Detections[2]
AR01	%LEL	1226	0	< 1 %
	VOC	1226	0	< 0.1 ppm
AR02	%LEL	1267	0	< 1 %
	VOC	1267	1232	0.1 – 21.6 ppm
AR03	%LEL	1298	0	< 1%
	VOC	1298	1055	0.1 – 12.2 ppm
AR04	%LEL	1456	0	< 1 %
	VOC	1456	575	0.1 – 13.5 ppm
AR05	%LEL	1481	0	< 1 %
	VOC	1481	0	< 0.1 ppm
AR06	%LEL	3844	0	< 1 %
	VOC	3844	371	0.1 – 5.9 ppm
AR07	%LEL	3361	0	< 1 %
	VOC	3361	57	0.1 – 5.6 ppm
AR08	%LEL	3782	0	< 1%
	VOC	3782	161	0.1 – 10.7 ppm
AR09	%LEL	3147	0	< 1 %
	VOC	3147	18	0.1 – 2.7 ppm
AR10	%LEL	3638	0	< 1 %
	VOC	3638	0	< 0.1 ppm

[1]*Please note: The data displayed here has not undergone complete QA/QC analysis and is presented in a preliminary format.*

[2]*Values listed under Range of Detections preceded by the "<" symbol are considered non-detections and the limit of detection (LoD) value is listed to the right.*

Analytical Air Sampling

Analytical air samples were collected during this time period to assess potential worker exposure and potential off-site migration of target analytes during product recovery operations. Five samples were collected in the breathing zone of personnel conducting various recovery operations and analyzed for benzene, toluene, ethylbenzene, xylene, and n-hexane in accordance with NIOSH Method 1501 and the OSHA benzene substance-specific standard. Four minican evacuated canister samples were set out in the community to assess for the potential presence of crude oil constituents. All samples will be sent to an American Industrial Hygiene Associate (AIHA) accredited laboratory for analysis of VOCs in accordance with USEPA TO-15.

Table 3: Cumulative Analytical Sample Count

February 2, 2016 07:00

Analyte	Count of Samples Collected	Count of Results Received from Lab	Count of Received Validated Data Reports
BTEX	15	0	0
TO-15 List	4	0	0
